BOUGAINVILLA DRIVE DRAINAGE & LANDSCAPING PROJECT UPDATE

FOR MORE INFO, CALL PUBLIC INFORMATION
OFFICER STEVE d'OLIVEIRA AT 954-640-4209.

FINAL LAYER OF ASPHALT COMING NEXT WEEK

Work crews are preparing to install a final layer of asphalt next week! The road south of Washingtonia Avenue will be done first, followed by the north area later in the week.

Other work is also scheduled next week, including landscaping, curbing for the medians north of Washingtonia, roadway clean-up, sidewalk repairs and other punch-list items.

The project will be substantially completed by Saturday, March 30.

The decorative sidewalk work will not take place until this summer. The asphalt needs 30 to 45 days to cure before any stamping work can be started.

The Town appreciates the patience of residents in dealing with dust, construction and parking issues. A number of residents have had to temporarily park elsewhere during the project while access to the vehicle spaces located in front of their buildings was blocked.

Here is how work on the rest of the project will proceed:

- **Sidewalk replacement.**
- **Street and swale paving (first layer).**
- **Concrete curb construction (for landscaping).**
- **Landscaping.**
- **Street and swale paving (final asphalt layer).**
- **Stamped asphalt and intersection treatments.**

Project Background

Work on the **Bougainvilla Drive** drainage and landscaping project began Sept. 24 and should be completed in March.

This project will resolve the long-standing drainage problems in the neighborhood. The Town will install an exfiltration drainage system designed to handle a 10-year storm.

For safety reasons, Bougainvilla Drive is blocked off to outside traffic during the day; some parking spaces in front of buildings will also be blocked off overnight.

In addition to drainage, trees and bushes will be planted in selected areas along the street and on portions of **Washingtonia Avenue** between **State Road A1A** and **Poinciana Street**. A decorative stamped street pavement will also enhance that intersection and the paved swales in the project area.

The work started at the **Fire Station** (adjacent to Town Hall) and will proceed north on both sides of the street to **Pine Avenue**. Residents are advised to watch the progress of the construction to anticipate when work will begin in front of their home or apartment.

If you have questions, contact **Keith Mote** at **Flynn Engineering Services**. He can be reached at **954-522-1004** or **954-303-5836** (cell). His e-mail address is kmote@flynnengineering.com.
